

v4 Signature SDK - Installer options

Running the Installer

Install the SDK by running the 32 or 64 bit MSI file as required:

Wacom-Signature-SDK-x86-version.msi

Wacom-Signature-SDK-x64-version.msi

To install the SDK normally, run from Windows Explorer.

Alternatively, launch the installer with msixec:

msiexec /i Wacom-Signature-SDK.msi

The quiet option allows a UI free installation:

msiexec /q /i Wacom-Signature-SDK.msi

The logging option can be used to record the installation, e.g.:

*msiexec /q /l*v log.txt /i Wacom-Signature-SDK.msi*

The product can be uninstalled using the command:

msiexec /x Wacom-Signature-SDK.msi

Note for Windows Vista / 7 / 8:

The installer must be run in an elevated mode. When run normally in interactive mode (without the quiet option), it will prompt for elevation or Administrator credentials. When using the quiet option, it must be run from an elevated command line, e.g.:

Start -> All Programs -> Accessories -> Right-click "Command Prompt" then select "Run as Administrator"

Installer Options

A number of options are available so that specific components can be installed with or without a full SDK installation:

Option	Command
To include/preselect Java components:	JAVA=1
To include/preselect .Net components:	DOTNET=1
To exclude x86 components from x64 installer*:	WIN32=0
To exclude Windows shortcuts and utilities:	MINIMAL=1
To add 32-bit component folders to system PATH:	ADDPATH=Win32
To add 64-bit component folders to system PATH:	ADDPATH=Win64
To disable the hourglass icon displayed by the Wizard control on the STU-430 and STU-530	WIZARDSHOWWAIT=0
To use shared access to an STU tablet	STUSHARED=1

* By default the x64 installer will install both 32- and 64-bit components.

Examples

Install the SDK with Java components preselected:

```
msiexec JAVA=1 /i Wacom-Signature-SDK-x86-1.26.0.msi
```

Install components for an HTML application:

```
msiexec /q MINIMAL=1 /i Wacom-Signature-SDK-x86-1.26.0.msi
```

Install components for a Java application:

```
msiexec /q MINIMAL=1 JAVA=1 /i Wacom-Signature-SDK-x86-1.26.0.msi
```
